2021-2022
DIAA ATHLETIC PHYSICAL AND CONSENT FORMS

Upon publication of this packet, these forms **MUST** be utilized when completing required DIAA forms for athletic participation.. Each year, the DIAA will utilize this cover letter to update providers on any important changes and important dates.

The DIAA Sports Medicine Advisory Committee recommends that the required forms be completed by the student athlete's primary care provider (medical home) to ensure continuity of medical care. These forms must be completed **after April 1st each year based on a physical performed by the signing physician within one year of the date of signature.**

Key Changes:

- Please refer to updated COVID information sheets and regulations for latest health and safety information.
- On the history form(page 3), all questions should be answered based on complete medical history (not just in the last year).
- On the physical form (page 4), a section for date of clearance has been added next to the "signature of health care professional". The date the forms are filled out does not have to be the same day that the physical was performed. See above for timing of physical.

Delaware Interscholastic Athletic Association
Pre-Participation Physical Evaluation/Consent Form

The DIAA pre-participation physical evaluation and consent form consists of seven pages. Pages two, three and five require a parent's signature while pages six and seven are references for the parent and student athlete to keep. Page four requires the exam date and physician's signature and page five requires the clearance to participate date and physician's signature. **The student must be cleared to participate on or after April 1 based on a physical examination conducted within 12 months of the signature. The clearance is valid through June 30 of the following school year unless a re-examination is required.**

Delaware Interscholastic Athletic Association
Parent/ Player Concussion Information Document

A concussion is a brain injury and all brain injuries are serious. They are caused by a bump, blow, or jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, **all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly.** In other words, even a "ding" or a bump on the head can be serious. You can't see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

Symptoms may include one or more of the following:

Headaches	Pressure in head	Nausea or vomiting	
Neck pain	Balance problems	Dizziness	
Disturbed vision	Light/noise sensitivity	Sluggish	
Feeling foggy	Drowsiness	Changes in sleep	
Amnesia	"Don't feel right"	Low energy	
Sadness	Nervousness	Irritability	
Confusion	Repeating questions	Concentration problems	

Signs observed by teammates, parents and coaches may include:

Appears dazed	Vacant facial expression	
Confused about assignment	Forgets plays	
Unsure of game/score etc	Clumsy	
Responds slowly	Personality changes	
Seizures	Behavior changes	
Loss of consciousness	Uncoordinated	
Can't recall events before or after hit		

What can happen if my child keeps on playing with a concussion or returns to soon?

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion occurs, particularly if the athlete suffers another concussion before completely recovering from the first one (second impact syndrome). This can lead to prolonged recovery, or even to severe brain swelling with devastating and even fatal consequences. It is well known that adolescent or teenage athletes will often under report symptoms of injuries, and concussions are no different. As a result, education of administrators, coaches, parents and students is the key for the student-athlete's safety.

If you think your child has suffered a concussion

Any athlete even suspected of suffering a concussion should be removed from the game or practice immediately. No athlete may return to activity after an apparent head injury or concussion, regardless of how mild it seems or how quickly symptoms clear, without medical clearance. Close observation of the athlete should continue for several hours. You should also inform your child's coach if you think that your child may have a concussion Remember it is better to miss one game than miss the whole season. And when in doubt, the athlete sits out.

SUDDEN CARDIAC ARREST AWARENESS SHEET

What is Sudden Cardiac Arrest?

- An electrical malfunction (short-circuit) causes the bottom chambers of the heart (ventricles) to beat dangerously fast (ventricular tachycardia or fibrillation) and disrupts the pumping ability of the heart.
- Occurs suddenly and often without warning.
- The heart cannot pump blood to the brain, lungs and other organs of the body.
- The person loses consciousness (passes out) and has no pulse.
- Death occurs within minutes if not treated.

What causes Sudden Cardiac Arrest?

- Conditions present at birth (inherited and non-inherited heart abnormalities)
- A blow to the chest (Commotio Cordis)
- An infection/inflammation of the heart, usually caused by a virus. (Myocarditis)
- Recreational/Performance-Enhancing drug use.
- Other cardiac & medical conditions/Unknown causes. (Obesity/Idiopathic)

What are the symptoms/warning signs of Sudden Cardiac Arrest?

- Fainting/blackouts (especially during exercise)
- Dizziness
- Unusual fatigue/weakness
- Chest pain
- Shortness of breath
- Nausea/vomiting
- Palpitations (heart is beating unusually fast or skipping beats)
- Family history of sudden cardiac arrest at age < 50

ANY of these symptoms/warning signs may necessitate further evaluation from your physician before returning to practice or a game.

What are ways to screen for Sudden Cardiac Arrest?

- The American Heart Association recommends a pre-participation history and physical including 12 important cardiac elements.
- **The DIAA *Pre-Participation Physical Evaluation – Medical History* form includes ALL 12 of these important cardiac elements and is mandatory annually. Please answer the heart history questions on the student health history section of the DIAA PPE carefully.**
- Additional screening using an electrocardiogram and/or an echocardiogram is readily available to all athletes, but is not mandatory.

Where can one find additional information?

- Contact your primary care physician
- American Heart Association (www.heart.org)
- August Heart (www.augustheart.org)
- Championship Hearts Foundation (www.champhearts.org)
- Cody Stephens Foundation (www.codystephensfoundation.org/)
- Parent Heart Watch (www.parentheartwatch.com)
- NFHS Learn Center – Sudden Cardiac Arrest Video (www.nfhslearn.com)

All parents and players must sign the signature portion of the PPE indicating they have read and understand the above.
