Required field(s): The box found at column Current Info and row District (Choose First)

	Good Repa	air Questi	ons	
System Group	Good Repair Questions	Response	Severity	Severity Guidance
Conveyances	Are your elevators unreliable, with frequent service calls?			Minor - Occasional nuisance issues with elevator but generally operational Moderate - Usually operational but with some known issues or somewhat frequent downtime. Major - Significant known issues, unreliable and frequent downtime
	Are there any problems or inadequacies with exterior lighting?			 Minor - Most fixtures are operational, some may not work, some may provide intermittent service. Moderate - Most fixtures generally work, some do not work, some areas are not sufficiently lit. Major - Many fixtures are not operational, intermittent and/or there are saftey concerns about insufficient lighting.
Electrical	Is the electrical service outdated, undersized, or otherwise problematic?			Minor - Some areas do not have enough outlets given the need, ocassionaly breakers need to be reset due to overload. Moderate - Breaker panels are fully utilized, many areas do not have sufficient outlets, local breaker resets are routine in some areas, main breakers are hot or noisy. Major - Switchgear is overloaded, main breakers trip, some breakers are intentionally shut off to limit use, there are known major issues with the system.
General	Are there any other unresolved construction defects or significant issues/hazards at the property that have not yet been identified above?			Minor - single or limited number of hazards that don't impact building use or occupant safety Moderate - multiple issues that if left unaddressed could progress to impact building use or occupant safety Major - issues pose an immediate threat to occupant safety or limit building use
	Are any areas of the facility inadequately cooled?			Minor - Some inhabited areas are uncomfortable 5-10 days a year Moderate - Many areas are uncomfortable during warm months, the building may occasionally be closed during extreme heat. Major - Most or all areas lack cooling, building will be likely be closed during extreme heat.

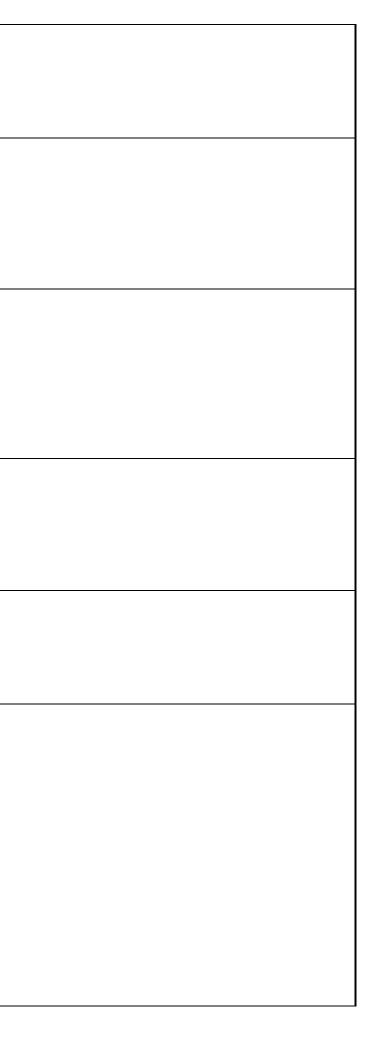

Are any areas of the facility inadequately heated?	 Minor - Some inhabited areas are uncomfortable 5-10 days a year Moderate - Many areas are uncomfortable during extreme cold , space heaters are utilized in some areas, lack of heating redundancy. Major - Generally insufficient heating capabilities during cold months, heating systems are maxxed, freezing pipes, school closures due to cold.
Are any areas of the facility inadequately ventilated?	 Minor - Some generally unoccupied or storage areas have poor or no ventilation Moderate - Storage areas are not ventilated and there is insufficient ventilation in some unoccupied areas. Major - The building has generally poor ventilation in a significant amount of occupide spaces.
Are there any poorly insulated areas?	 Minor - Some areas of the building are poorly insulated, generally in unoccupied areas. Moderate - The building has some areas in occupied spaces that are poorly insulated. Major - Much of the building has poor insulation, including occupied areas.
Have there been any leaks or pressure problems with HVAC supply/return lines?	 Minor - There are small seepage leaks or drips in areas that do not affect students or staff. Low pressure in some areas may be experienced during peak times. Moderate - There may be persistent leaks in certain locations and/or pressure issues during routine use. Major - There are pervasive leaks throughout the systems and/or insufficient pressure to maintain proper operations.
Are there any areas of visible mold/mildew growth?	 Minor - Mold may be observed in some areas, particularly in basement, storage roms or mechanical spaces. Moderate - Mold is observed in areas that can become damp during humity or rain cycles, typically near windows or door areas. Major - Mold is observed in other locations in various areas of the building.

Mechanical Systems

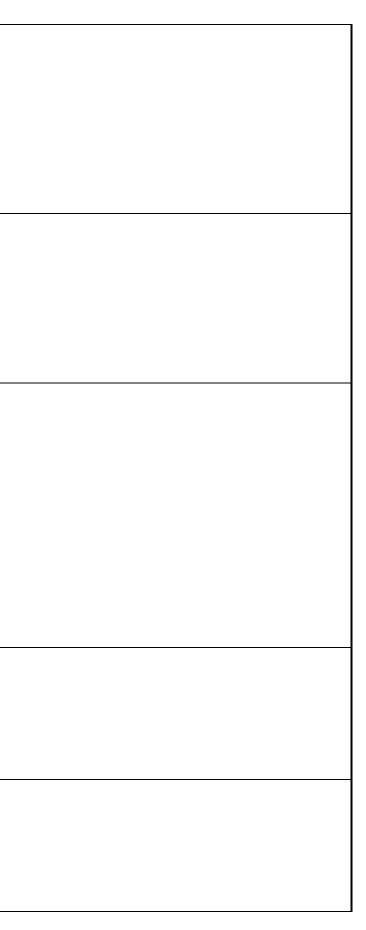

Mold/Mildew	Are there complaints of musty odors?	Minor - Infrequent complaints from few individuals.Moderate - Frequent complaints during high humidity or after rains.Major - Constant complaints and routinely perceptible odors.
	Are there areas of the facility that are regualrly damp and/or humid?	Minor - Some unoccupied areas of the building are damp and humid during periods of high humidity.Moderate - Some occupied areas of the building are damp and humid during periods of high humidity.Major - More than half of the building experiences dampness and humidity
	Are there any clogging/back-up problems?	 Minor - Ocassional clogging or backup due to design or condition issues (not misuse). Moderate - Repeated clogging or backup in specific areas - known issues. Major - Poor or inadequate system design resulting in significant ongoing issues.
	Are there any plumbing leaks?	 Minor - There are small seepage leaks or drips in areas that do not affect students or staff. Moderate - There may be persistent leaks in certain locations. Major - There are pervasive leaks throughout the system.
Plumbing Systems	Are there any plumbing water pressure issues?	Minor - Low pressure in some areas may be experienced during peak times.Moderate - There may be persistent pressure issues during routine use.Major - There is insufficient pressure to maintain proper operations.
	Have there been any leaks or pressure problems with steam service?	 Minor - There are small seepage leaks or drips in areas that do not affect students or staff. Low pressure in some areas may be experienced during peak times. Moderate - There may be persistent leaks in certain locations and/or pressure issues during routine use. Major - There are pervasive leaks throughout the systems and/or insufficient pressure to maintain proper operations. NOTE: <u>ANY</u> high pressure steam leaks should be condidered an emergency and reported to the fire department immediately.

	Are there any roof leaks?	Minor - Seepage or occasional dripping. Moderate - Small but persisent leak(s) that are localized. Major - Significant lagre or widespread leaks, may affect other systems or finishes.
Roofs	Are there any problems with roofing systems?	Minor - Roof is generally sound but there are areas of ponding, poor drainage or damaged flashing - no leaks or only minor infrequent leaks. Moderate - Roof is serviceable but there are softareas when walking on the roof and there are minor but ongoing leaks. Major - Roof has persistent leaks and is known to have issues with ponding, flashing and/or drainage.
Site	Is site/parking drainage inadequate, with excessive ponding or other problems?	Minor - Occasional ponding a certain areas during or after heavy rainfall. Moderate - Ponding in some areas during normal rainfall, that resolves in a day or so. Major - Excessive ponding and standing water in several areas during normal rains, insufficient overall drainage.
Skin	Are there any wall leaks?	Minor - Occasional dripping during windy conditions Moderate - ocasional leaks during normal rain and heavy leaks during windy conditions, may cause finish damage Major - Always leaks during rain, visible interior damage to walls and flooring.
SKIT	Are there any window leaks?	Minor - Occasional dripping during windy conditions Moderate - ocasional leaks during normal rain and heavy leaks during windy conditions, may cause finish damage Major - Always leaks during rain, visible interior damage to walls and flooring.

		Minor - The basement has minor leaks
Structural	Are there any basement leaks?	during times of heavy rain - occurences are occasional and happen infrequently. Moderate - During heavy rains, basement will leak and require water abatement. Occasional small leaks during prolonger periods of rain. Major - Frequently leaks even during modest or small rains or melting.
	Are there any problems with foundations or structures, like excessive settlement?	 Minor - Visible cracks of 1/8" wide or more or surface spalling. Moderate - cracks of 1/4" or more or visible shedding of concrete material. Major - Cracks 1/2" or wider, or visible settling of the structure or walls, significant and worsening cracking, known issues identified by structural engineer.
Gas Leaks	Have there been any gas leaks observed or reported in the facility?	 Minor - Occasionally, an odor of gas is noticed or reported on the exterior of the building near gas meters or regulators - not a persistent issue. Moderate - Odors on the exterior of the building are routinely noted or reported near gas meters or regulators. Major - Any other reports of ongoing gas odors, <u>OR ANY INSIDE THE BUILDING</u>. Note that this should be considered an emergency situation and reported to the fire department immediately.
Building Envelope	Are there any significant cracks or defects in the building exterior walls?	Minor - Visible cracks of 1/8" wide or more or surface spalling.Moderate - cracks of 1/4" or more or visible shedding of concrete material.Major - Cracks 1/2" or wider, or visible settling of the walls, significant and worsening cracking.
	Are there areas with evidence of water intrusion, not associated with known leaks?	 Minor - Occasional staining of walls or ceilings or near windows. Moderate - Visible staining on walls or ceilings that tend to become worse after heavy rains. Major - walls that become soft or wet after rains.

	Has the water from consumption points in the school been tested for lead in the last three years?		 Minor - Single or limited number of hazards that don't impact building use or occupant safety. Moderate – Multiple fixtures with exceedances or localized area with main or supply piping contamination. Major – Widespread exceedances suggest multiple sources or indicate main or source piping may contain lead. 	
Water Quality	Are the fixtures at consumption points greater than 10 years old?		Minor - Less than 10% Moderate - 10-50% Major - Over 50%	
	Are water filters present at all consumption points?		Minor - Less than 10% Moderate - 10-50% Major - Over 50%	
	Is there a written filter replacement/maintenance plan in place for all consumption points?	N/A	N/A	
	Are there reports of complaints related to water color, clarity, odor or taste?		 Minor - Infrequent complaints from few individuals. Moderate - Routine complaints from numerous individuals. Major - Constant complaints and routinely perceptible odor and taste issues. 	
	Are interior surfaces (built-in counters, casework, display cases, shelving, etc) in good condition?		 Minor - Some minor chipping or discoloration of surfaces or finishes, but generally presentable and in good to fair condition. Moderate - General wear/tear an aging of surfaces and finishes, serviceable but somewhat worn. Major - Aged, unsightly and/or lots of chipped sufaces, non-functional doors or loose shelving thoughout much of the building. 	
Interior Surfaces	Are there areas of deterioriated paint, wood, wallpaper or other surfaces in need of repair?		 Minor - Generally in good to fair condition, some areas may need repair or repainting but otherwise ok. Moderate - Finsihes are aged, dull, smudged or peeling in some areas of the building, generally servicable but somewhat unsightly. Major - Significant deterioration of wall finishes, unsightly appearance, peeling wallpaper and/or chipped or damaged finishes of other surfaces in much of the building.

	Are floors generally in good repair and free of cracks, gaps, etc.?		 Minor - Occasional chipping or cracking in flooring but otherwise in good servicable condition. Moderate - cracking or chpiing in a few areas, cracks may be large enough to be felt underfoot. Major - excessive cracking or chipping with some areas presenting potential tripping hazards. 	
Hazardous Materials	Are any hazardous materials present improperly stored and labeled?	N/A	N/A	
	Is there an asbestos management plan in place, if applicable?	N/A	N/A	
	Has the fire alarm system been inspected as required?	N/A	N/A	
Fire Safety	Are fire exits clearly marked?	N/A	N/A	
	Is there an up to date emergency evacuation plan?	N/A	N/A	
	Has an accessibility study been performed at the site? If so, when? - Enter in Comments	N/A	N/A	
ADA	If an ADA study has occurred, have the associated recommendations been addressed? In full or in part? - Enter in Comments	N/A	N/A	
	Have there been regular complaints about accessibility issues, or previous or pending litigation?	N/A	N/A	

Required field(s): The entire Response column.

			Modernization Questions	
Туре	Class	Category	System	Compliance Level
		Appliances /Vending	Energy Star Refrigerators in Breakrooms / Community Rooms Install Energy Savers on Vending, Snack Machines Install Front Load Commercial / Residential Washers Replace Existing Freezers With High Efficiency Freezers	
Energy	Building	Envelope	Add Reflective Coating To Exterior Windows Air seal Bldg. Control External Air Leakage Install Rapid Closing Overhead Doors -Warehouse/loading dock Install Reflective Insulation Between Radiators And External Wall Upgrade Attic Insulation - R60 Attic Insulation Upgrade Exterior Windows - Double pane windows with thermal breaks Low-e Upgrade Wall Insulation - R30 Wall Insulation	
Ď		Utility Metering	Disconnect & Reconcile Multiple Utility Meters (Central Supply)	
		Electrical	Install Sub-meters For Electric / Water Electrical Distribution System Upgrade (Within Past 10 years)	
	Electrical	Lighting	Convert "EXIT" Signs to LED Convert Exterior Lights to LED Install Automatic Lighting Controls Interior LED lighting and occupancy with daylight controls	
Energy		Air Handling	Energy Recovery Ventilation (ERV) and air handling units with heat recovery wheels High Efficiency Motors - AHU Insulate Air Ducts Minimum Efficiency Reporting Value (MERV) 13 filters, MERV 11 minimum if higher-rated New ductwork system adequate for heating and cooling demand (Within Past 10 years) Outside Air Control Through Co2 Sensors in AHU Steam Clean AHU Fan Coils (Annually)	
rgy		Controls	DDC Controls throughout the building Independent temperature control in rooms, offices, classrooms Install Building Energy Management System Install Self Learning Programmable Thermostats Install Thermostatic Radiator Valve (TRV) controls for Steam Radiators Re-Commission The Building & Control Systems (Within past five years) Timers on Manual Exhaust Fans Upgrade Pneumatic to DDC for Building Controls	
Energy	HVAC	Cooling	Dehumidification systems for summer use Install high SEER Split Heat Pump Air Conditioning Systems Install SEER 10+ Through the Window AC Units Install SEER 16+ Split Air Conditioning Systems Install SEER 18+ Ductless Split Air Conditioning System Insulate Refrigerant Lines Replace Rooftop Package Units (Within Past 10 years) Upgrade Chillers /Cooling Systems (Within Past 10 years)	
Energy		Heating	Install High Efficiency Bojtens (Within Yate To Years) Repair / Install Hot Water Pipe Insulation (Annually) Repair /Install Insulation on Hot Surfaces And Tanks Replace Defective Steam Traps Electric baseboard heat Replace Unit Heaters (Within Past 10 years) Upgrade Electric Heating System To Heat Pumps	
		Hydronic and piping	Install Hydronic Piping 4 pipe system	
		Make-up air units	Install MUA units in kitchens High Efficiency Motors - Cooling Towers	
βλ		Pump /Fan Motors DWH	VFD on AHU and Pump Motors Lower DWH Setpoint to 122F - (Not for Commercial Kitchen) Setback loop on Circulation Pump	
Energy		HVAC	Upgrade Domestic Water heaters (Within Past 10 years) Repair / Install Hot Water Pipe Insulation (HVAC Piping) Repair /Install Insulation on Hot Surfaces And Tanks (HVAC Systems)	
ŭ		Irrigation	Install Smart Irrigation System	
ш	Plumbing	Plumbing	Central Domestic Hot Water separate from full heating system? Install 0.125GPF Urinals Install 0.5 Low Flow Faucet Aerators in Restrooms Install 1.0GPM Low Flow Flush Tank Toilets Install 1.5GPM Aerator in Kitchen/ Break Rm. Faucets Install 1.5GPM Low Flow Shower Heads Retrofit Commercial Toilets to Dual Flush	
		Pump /Fan Motors	High Efficiency Motors - Circulation Pumps	
L		Fire Alarm Fire Suppression	Upgrade Fire alarm system with addressable panel Full-coverage fire suppression	
0		Flooring	Are floors durable with low maintenance? (Durable rubber, terrazzo, high quality VCT, etc)	
Modernization	Building	Generator Interior upgrades	Is backup generator system on site providing full backup? Casework upgrade Install suspended ceiling in areas of no finish	
ni		Security	Is elevator available to staff and students. Card access system	
	Plumbing	Site	Sufficient parking available	
de	Plumbing	Plumbing Comm upgrade	Upgrade plumbing system supply and sanitary water system (Within Past 10 years) Ethernet and high bandwidth Wi-Fi	
õ	C	Interior upgrades	Electronic Whiteboards in classrooms	
Σ	Sufficiency	Security Site	PA systems and Visual displays for classrooms and Hallways Artificial turf playing fields and courts	
		0.00	Non-idling bus lanes

Asset Density Guidance			
System Group	System	Guidance Text	
Electrical Distribution	Electrical Service - MDP - High Density	Technical high schools with dense laboratory configurations <i>could be</i> High Density, Assessor Discretion.	
Electrical Distribution	Electrical Service - MDP - Low Density	Outbuildings, pavilions, etc with light electrical systems (like a handful of outlets) should be low density.	
Electrical Distribution	Electrical Service - MDP - Medium Density	Most schools will be Medium Density	
Electrical Distribution	Electrical Service - MDP/Gen/UPS - High Density	If the building has <i>both</i> a UPS system and a large generator, consider High Density, especially if a technical high school with labs.	
Electrical Distribution	Electrical Service - MDP/Gen/UPS - Low Density	Outbuildings, pavilions, etc with light electrical systems (like a handful of outlets) but also have a small generator or UPS should be low density.	
Electrical Distribution	Electrical Service - MDP/Gen/UPS - Medium Density	Most schools will be Medium Density , use this selection if they also have a generator and/or ups.	
Electrical Distribution	Lighting - High Density & Standard Fixtures	Schools with primarily LED lighting fixtures should be considered High Density .	
Electrical Distribution	Lighting - Low Density & Standard Fixtures	Schools with typical surface mounted fluorescent lighting and incandescent type bulb fixtures (even with LED or CF retrofits) can be considered Low Density.	
Electrical Distribution	Lighting - Medium Density & Standard Fixtures	Schools with primarily suspended ceiling mounted fluorescent lighting fixtures (even with LED or CF retrofits) can be considered Low Density.	
Electrical Distribution	Lighting - Very High Density or High-End Fixtures	Schools with premium quality fixtures and higher lighting density should be classified as Very High Density	

Electrical Distribution	Security & Low Voltage Systems - Average Density	Most schools will be Average Density
Electrical Distribution	Security & Low Voltage Systems - High Density	Schools with sophisticated security systems or other Low Voltage systems may be High Density
Electrical Distribution	Switchgear w/Sub Panels - High Density	Technical high schools with dense laboratory configurations <i>could be</i> High Density, Assessor Discretion.
Electrical Distribution	Switchgear w/Sub Panels - Low Density	Outbuildings, pavilions, etc with light electrical systems (like a handful of outlets) should be low density.
Electrical Distribution	Switchgear w/Sub Panels - Medium Density	Most schools will be Medium Density
Electrical Distribution	Switchgear w/Sub Panels/Gen/UPS - High Density	If the building has <i>both</i> a UPS system and a large generator, consider High Density, especially if a technical high school with labs.
Electrical Distribution	Switchgear w/Sub Panels/Gen/UPS - Low Density	Outbuildings, pavilions, etc with light electrical systems (like a handful of outlets) but also have a small generator or UPS should be low density.
Electrical Distribution	Switchgear w/Sub Panels/Gen/UPS - Medium Density	Most schools will be Medium Density , use this selection if they also have a generator and/or ups.
Life Safety	Sprinkler System, High Density/Complexity	Generally, schools that have complete sprinkler coverage should be High Density .
Life Safety	Sprinkler System, Low Density/Complexity	Schools with primarily stand-pipe systems and few sprinkler heads should be considered Low Density

Life Safety	Sprinkler System, Medium Density/Complexity	Schools with partial sprinkler systems (like an addition that is fully sprinklered, while the original is not) should be Medium Density
Plumbing Fixtures	Supply & Sanitary, High Density (w/Fixtures)	Technical high schools with dense laboratory configurations could be High Density, Assessor Discretion.
Plumbing Fixtures	Supply & Sanitary, Low Density (w/Fixtures)	Most schools will be Low Density
Plumbing Fixtures	Supply & Sanitary, Medium Density (w/Fixtures)	Schools with Locker Rooms/Showers and science labs should be Medium Density.
Plumbing Fixtures	Supply & Sanitary, Very Low Density (w/Fixtures)	Outbuildings, pavilions, etc with light plumbing (like hose connections/and or drinking fountains) should be very low density.
Program Support Equipme	Commercial Kitchen Equipment - Cooking	A Cooking kitchen will be a "full kitchen" where food is stored, prepared, cooked and served.
Program Support Equipme	Commercial Kitchen Equipment - Serving Only	A Serving Only kitchen is where food is brought in from the outside and immediately served. There are no cooking or rewarming equipment.
Program Support Equipme	Commercial Kitchen Equipment - Warming Only	A Warming kitchen is where previously prepared and cooked food is brought in from the outside and where the food is then rewarmed and served on-site.
Program Support Equipme	Casework - Premium Quality	Premium quality casework is typically constructed of 100% solid ¾" wood or metal materials. It is durable and stout, sometimes with glass front cabinets and stone or synthetic stone counters, if equipped.
Program Support Equipme	Casework - Standard Quality	Standard quality Casework is typically MDF type materials of ¾" construction and may contain durable synthetic counters.

Program Support Equipme	Casework - Sub- Standard Quality	Sub-standard casework is constructed of materials ½" or less in thickness and may feature non-durable laminate or wood counters.
Modulars	Modular Bldg Classroom/Office - Basic	Modulars that are stand-alone, have "trailer" style finishes and lack typical building/classroom finishes will be considered Basic.
Modulars	Modular Bldg Classroom/Office - Standard	Most Modulars will be considered Standard if they feature typical building, finishes and are fairly indistinguishable from a typical building to the untrained eye.
Relocatables	Relocatable Bldg Classroom/Office - Basic	Relocatables that are stand-alone, have "trailer" style finishes and lack platform access and/or heating/cooling will be considered Basic.
Relocatables	Relocatable Bldg Classroom/Office - Standard	Most relocatables will be considered Standard if they feature skirting, platform access and typical building/classroom-type finishes.
